 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DB

5196523-22
; PATENT NO. 5196523
; PATENT NO. 5196523
TITLE OF INVENTION: CONTROL OF GENE EXPRESSION BY GLUCOSE, CALCIUM AND TEMPERATURE
NUMBER OF SEQUENCES: 28
CURRENT APPLICATION DATA:
                                                                                                                                                                                                                            DЬ
                                                                                                                                                                                                                                                             QУ
                                                                                                                                                                       RESULT 9
                                                                                                                                                                                                                                                                                                                                                                            5196523-23
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         5196523-23; Patent No. 5196523
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ; TYPE: DNA; ORGANISM: Homo sapiens US-09-404-879A-372
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         US-09-404-879A-372/c

The present invention specifically claims an element shown by: (A) a sequence having replaced 1-3 bases with the other base(s), which induces competence of endoplasmic reticulum. Also described are: (1) a DNA induces containing the above mentioned element, optionally further containing a ctivity with stress on endoplasmic reticulum of approach: (1) a DNA having DNA. The element can be used for the inhibition of growth and induction of apoptosis of cancer cells, and improvement of symptoms of autoimmune diseases and cystic fibrosis by inhibition of autoantibody formation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
The present invention specifically claims an element shown by: (A) a 19 bp base sequence, CCAATNNNNN NNNNCCACG (ERSE); or (B) a modified base sequence having replaced 1-3 bases with the other base(s), which induces competence of endoplasmic reticulum. Also described are: (1) a DNA having transcription inducing activity with stress on endoplasmic containing a promoter DNA; and (2) a vector containing the above mentioned element, optionally further optionally with the DNA. The element can be used for the inhibition of growth and induction of apoptosis of cancer cells, and improvement of symptoms of autoimmune diseases and cystic fibrosis by inhibition of
                                                                                                                                                                                                                  Example 1; Fig 3; 25pp; Japanese.
                                                                                                                                                                                                                                                                           New control element for stress competence of endoplasmic reticulum
                                                                                                                                                                                                                                                         useful for inhibition of growth and induction of apoptosis in cancer
                                                                                                                                                                                                                                                                                                                          WPI; 1999-603708/52

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention specifically claims an element shown by: (A) a 19 bp base sequence, CCAATNNNNN NNNNCCACG (ERSE); or (B) a modified base sequence having replaced 1-3 bases with the other base(s), which induces competence of endoplasmic reticulum. Also described are: (1) a DNA reticulum containing the above mentioned element, optionally further containing a promoter DNA; and (2) a vector containing the element containing the above mentioned element, optionally further optionally with the DNA. The element can be used for the inhibition of gymptoms of autoimmune diseases and cystic fibrosis by inhibition of autoantibody formation. AAR225632 to AAR225657 represent elements used in an aramonia from the present increases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAZ25636;
                                                                                                                                                                                                                                               The present invention specifically claims an element shown by: (A) a 19 bp base sequence, CCAATNNNNN NNNNCCACG (ERSE); or (B) a modified base sequence having replaced 1-3 bases with the other base(s), which induces transcription with stress on endoplasmic reticulum used for stress competence of endoplasmic reticulum. Also described are: (1) a DNA having transcription inducing activity with stress on endoplasmic reticulum containing the above mentioned element, optionally further containing activities are sequenced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           04-MAR-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       14-SEP-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       JP11243959-A
                                                                                                                                                                     containing a promoter DNA; and (2) a vector containing the element optionally with the DNA. The element can be used for the inhibition of growth and induction of apoptosis of cancer cells, and improvement of symptoms of autoimmune diseases and cystic fibrosis by inhibition of autoantibody formation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAZ25637 standard; DNA; 19 BP.
                                                                                                                                                                                                                                                                                                                                                                                          The present invention specifically claims an element shown by: (A) a 19 bp base sequence, CCAATINNNN NNNNCCACG (ERSE); or (B) a modified base sequence having replaced 1-3 bases with the other base(s), which induces transcription with stress on endoplasmic reticulum used for stress competence of endoplasmic reticulum. Also described are: (1) a DNA having transcription inducing activity with stress on endoplasmic reticulum containing the above mentioned element, optionally further containing a promoter DNA; and (2) a vector containing the element containing the element can be used for the inhibition of growth and induction of apoptosis of cancer cells, and improvement of symptoms of autoimmune diseases and cystic fibrosis by inhibition of autoantibody formation. AAZ25632 to AAZ25657 represent elements used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Endoplasmic reticulum; ER; stress competence; control element;

Also described are: (1) a DNA reticulum containing the above mentioned element, optionally further containing a promoter DNA; and (2) a vector containing the element containing the reticulum containing the above mentioned element, optionally further optionally with the DNA. The element can be used for the inhibition of symptoms of autoimmune diseases and cystic fibrosis by inhibition of autoantibody formation. AAZ35637 to ANZ35657 represent elements used in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                             The present invention specifically claims an element shown by: (A) a 19 bp base sequence, CCAATNNNNN NNNNCCACG (ERSE); or (B) a modified base sequence having replaced 1-3 bases with the other base(s), which induces transcription with stress on endoplasmic reticulum used for stress competence of endoplasmic reticulum. Also described are: (1) a DNA
having transcription inducing activity with stress on endoplasmic reticulum containing the above mentioned element, optionally further containing a promoter DNA; and (2) a vector containing the element
                                                                                                                                                             Example 1; Fig 3; 25pp; Japanese.
                                                                                                                                                                                                   New control element for stress competence of endoplasmic reticulum - useful for inhibition of growth and induction of apoptosis in cancer
                                                                                                                                                                                                                                                                     WPI; 1999-603708/52

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      reticulum containing the above mentioned element, optionally further containing a promoter DNA; and (2) a vector containing the element optionally with the DNA. The element can be used for the inhibition of growth and induction of apoptosis of cancer cells, and improvement of symptoms of autoimmune diseases and cystic fibrosis by inhibition of autoantibody formation. AAZ25632 to AAZ25657 represent elements used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAZ25640
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 19 BP; 5 A; 6 C; 5 G; 3 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          transcription with stress on endoplasmic reticulum used for stress competence of endoplasmic reticulum. Also described are: (1) a DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention specifically claims an element shown by: (A) a 19 bp base sequence, CCAATNUNUN NUNUNCCACG (ERSE); or (B) a modified base sequence having replaced 1-3 bases with the other base(s), which induces
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New control element for stress competence of endoplasmic reticulum - useful for inhibition of growth and induction of apoptosis in cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        having transcription inducing activity with stress on endoplasmic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Example 1; Fig 3; 25pp; Japanese.

                         An endoplasmic reticulum stress transcription factor (bZIP) and cc capable of regulating transcription inducing activity exhibited by an CC element (ERSE) can be used in a method for controlling expression of CC an endoplasmic reticulum chaperone. The method comprises expressing CC bZIP. The method can be used for expression of a foreign protein by CC positively regulating expression of an endoplasmic reticulum controlling the expression of CC endoperone gene. bZIP is useful for controlling the expression of CC endoplasmic reticulum chaperone either positively or negatively in CC cells and therefore is useful for treatment or prophylaxis of CC cancers, arteriosclerosis, cystic fibrosis, ischaemic diseases. CC wounds and ulcers, bZIP also maintains the correct conformation of the expression of a foreign protein. This sequence taken from the cypression of a foreign protein (GRP) promoter GRP78 contains an ERSE like
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  optionally with the DNA. The element can be used for the inhibition of growth and induction of apoptosis of cancer cells, and improvement of symptoms of autoimmune diseases and cystic fibrosis by inhibition of autoantibody formation.
